

Controlling the Number of Camera Windows

The camera system software gathers information about the computer you are using and displays the number of camera windows that will fit your screen. However, sometimes it is wrong and sometimes you may just want more or fewer windows. To handle these situations, we have provided limited control by way of your login. If you include `_6` in your login, 6 windows will display. For 9 windows, use `_9` and for 15 windows use `_15`.
